1.简介 Introduction

随着锂电池在锂电行业的广泛应用，对电池管理系统也提出了高性能、高可靠性及高性价比等要求。本产品是专门针对锂电池设计的 BMS，它能够实时采集、处理和存储电池组在使用过程中的信息数据，保证电池组的安全性、可用性和稳定性。

With the wide application of lithium batteries in the lithium battery industry, requirements for high performance, high reliability and high cost performance are also put forward for battery management systems. This product is a BMS specially designed for lithium batteries. It can collect, process and store the information and data of the battery pack in real time during use to ensure the safety, availability and stability of the battery pack.

2.产品概述及特点 (Product Overview and Features) :

- ◆ 使用专业大电流走线设计及工艺，能经受超大电流冲击

Using professional high-current trace design and technology, it can withstand the impact of ultra-large current

- ◆ 外观采用注塑密封工艺，提升防潮，防元器件氧化程度，延长产品使用寿命

The appearance adopts the injection molding sealing process to improve moisture resistance, prevent the oxidation of components, and prolong the service life of the product

- ◆ 具有防尘、防震、防挤压等防护功能

dust proof, shockproof, anti-squeezing and other protective functions

- ◆ 有完整的过充、过放、过流、短路、均衡功能

There are complete over charge, over-discharge, over-current, short circuit, equalization functions

- ◆ 采用集成化的设计，将采集、管理、通信等功能集成于一体

The integrated design integrates acquisition, management, communication and other functions into one

- ◆ 具有通讯功能，可通过上位机对过充、过放、过流、充放电过流、均衡、过温、欠温、休眠、容量等参数进行设置

With communication function, parameters such as over charge, over-discharge, over-current, charge-discharge over-current, equalization, over-temperature, under-temperature, sleep, capacity and other parameters can be set through the host computer

5. 通信说明 Communication Description

默认为 UART 通讯, 可定制客户 RS485、CAN、UART 等通讯协议

The default is UART communication, and communication protocols such as RS485, CAN, UART, etc. can be customized

5.1 RS485 通信

默认达锂 RS485 通讯协议, 通过专用通讯盒与指定上位机进行通讯, 波特率默认为 9600bps。从而在上位机端察看电池的各种信息, 包括电池电压、电流、温度、状态、SOC、及电池生产信息等, 可授权登录后进行参数设置及相应控制操作, 支持程序升级功能。(本上位机适用于 Windows 系列平台的 PC 机)。

The default is up to the Daly RS485 communication protocol, which communicates with the designated host computer through a special communication box, and the default baud rate is 9600bps. Therefore, various information of the battery can be viewed on the host computer, including battery voltage, current, temperature, state, SOC, and battery production information, etc., parameter settings and corresponding control operations can

be performed after login, and the program upgrade function can be supported. (This host computer is suitable for PCs of Windows series platforms).

5.2 CAN 通信

默认达锂 CAN 协议，通信速率 250KB/S。

The default is Daly CAN protocol, and the communication rate is 250 kb/s.

5.3.蜂鸣器逻辑 Buzzer logic

在上位机配置蜂鸣器使能，且蜂鸣器接在 DO1 口；

充放电温度到达 60 度 响声 1 秒 停止一秒 如此持续进行蜂鸣报警

Configure a buzzer to enable on the computer APP , and connect the buzzer to the DO1 port;

When the charging and discharging temperature reaches 60 ° C, the sound will stop for one second, and then the buzzer alarm will continue

5.4 灯语逻辑 Indicator logic

本产品有一盏绿色 LED 灯，对灯语状态如下表。

This product has a green LED light, and the status of the light is shown in the table below:

1	关机、断电、休眠 Shutdown, power outage, hibernation	灯灭 light off
2	工作中，放电状态 During operation, discharge status	灯闪，0.5s 亮，2.5s 灭，3s 为一个周期 The light flashes, turns on for 0.5 seconds, turns off for 2.5 seconds, and takes 3 seconds as a cycle
3	工作中，充电状态 Charging state during operation	灯闪，0.5s 亮，0.5s 灭，1s 为一个周期 The light flashes, turns on for 0.5 seconds, turns off for 0.5 seconds, and takes 1 second as a cycle
4	工作中，无充放电 No charging or discharging during operation	灯闪，0.5s 亮，9.5s 灭，10s 为一个周期 The light flashes, turns on for 0.5 seconds, turns off for 9.5 seconds, and takes 10 seconds as a cycle

5.5 钥匙开关逻辑 Keyswitch logic

支持 KEY 控制 MOS，分三种情况：

1、钥匙控制放电 MOS 管，2、钥匙控制放电 MOS 管与休眠，3、失能。控制逻辑为正逻辑，也可以支持 5V/12V/24 外部电源唤醒。

Support KEY control MOS, divided into three situations:

1. Key controlled discharge MOS tube, 2. Key controlled discharge MOS tube and sleep, 3. Deactivation. The control logic is positive logic and can also support 5V/12V/24 external power wake-up.

6. 上位机说明 PC software Description

PC 上位机 DALY BMS Tool V1.0.0 功能默认显示数据监控界面，登陆界面输入密码并连接上位机通讯后，显示数据监控，参数读写，生产制造，更多等界面。

手机 APP 设置保护参数，同步二级和三级保护。

1、解析各模块发送的数据信息，然后将电压、温度、配置值等显示出来；

2、通过上位机向各模块配置信息；

3、生产参数校准;

4、BMS 升级。

The DALY BMS-V1.0.0 function of the PC software displays the data monitoring interface by default. After entering a password and connecting to the upper computer for communication, the data monitoring, parameter reading and writing, production manufacturing, and more interfaces are displayed.

The mobile app sets protection parameters and synchronizes secondary and tertiary protection.

1. Analyze the data information sent by each module, and then display the voltage, temperature, configuration value, etc.;

2. Configure information to each module through the host computer;

3. Calibration of production parameters;

4. BMS upgrade.

8. 接线示意图 Wiring diagram

8.1 接线说明 Wiring Instructions

- 先将保护板 B-线到电池组总负极;
First connect the B- line of the protection board to the total negative pole of the battery pack
- 排线从细黑线连接 B-开始, 第 2 根线连接第 1 串电池正极, 后面依次连接每一串电池的的正极; 再把排线插入保护板;
The cable starts from the thin black wire connected to B-, the second wire is connected to the positive electrode of the first string of batteries, and the positive electrode of each string of batteries is connected in turn; then insert the cable into the protection board
- 接线完成后, 观察绿色指示灯是否工作, 连接蓝牙 APP 或 PC 上位机查看是否有故障告警, 测量电池 B+, B-电压与 P+, P-电压值是否相同, 相同即保护板工作正常; 否则请按照上面重新操作;
After the line is completed, Observe whether the green indicator light is working, connect the bluetooth APP or PC application to check for any fault alarms, measure whether the voltages of battery B+ and B- are the same as those of P+ and P-. The same means that the protection board is working normally; otherwise, please re-operate according to the above;
- 拆卸保护板时, 先断开负载电源开关并拔出排线 (如果有两个排线, 先拔高压排线, 再拔低压排线), 再拆 P-, 最后拆动力线 B-。
When removing the protection board, First disconnect the load power switch and unplug the ribbon cable (if there are two cables, first pull out the high-voltage cable, then pull out the low-voltage cable), and then Remove P -, and finally remove power line B.

8.2 接线注意事项 Wiring Precautions

- 软件板连接顺序
确认排线焊接无误之后, 并且把随产品的配件 (如: 温控标配/电量板选配/蓝牙选配/GPS 选配/显示屏选配/定做通讯接口选配) 安装在保护板上面, 然后再把排线插入保护板插座; 保护板上面的蓝色 B-线接电池的总负极, 黑色的 P-线接在充放电的负极上面。
Software BMS connection sequence:

After confirming that the cable is welded correctly, install the accessories (such as: standard temperature control/power board option/Bluetooth option/GPS option/display option/custom communication interface

option) on the protection board , and then insert the cable into the socket of the protection board; the blue B-line on the protection board is connected to the total negative pole of the battery, and the black P-line is connected to the negative pole of charge and discharge.

当 NTC 漏插入时, BMS 会产生故障, 不能进行正常的充放电。

When NTC fails to insert, BMS will malfunction and cannot perform normal charging and discharging.

参数修改

保护板的串数跟保护参数(三元、铁锂)在出厂的时候是有默认值的, 但是电池组的容量是需要按电池组的实际容量 AH 进行设置的, 若容量 AH 没有正确设置, 则剩余电量的百分比就会不准, 首次使用需充满 100%作为标定, 其他保护参数也可以根据客户自身需求进行设置(不建议随意修改参数)。

Parameter modification:

The number of BMS strings and protection parameters (NMC, LFP, LTO) have default values when they leave the factory, but the capacity of the battery pack needs to be set according to the actual capacity AH of the battery pack. If the capacity AH is not set correctly, then The percentage of remaining power will be inaccurate. For the first use, it needs to be fully charged to 100% as a calibration. Other protection parameters can also be set according to the customer's own needs (it is not recommended to modify the parameters at will).

- 排线的接线方式参照保护板的接线流程, 智能板的 APP 可以修改参数, 出厂密码: 123456

The wiring method of the ribbon cable shall refer to the wiring process of the BMS. The smart board APP can modify parameters, factory password: 123456.

- 连接保护板 B-P 端口的导线锁螺丝时, 注意从保护板正面向背面紧固螺丝来压住导线, 以便背面散热片的固定孔可以紧贴电池包安装面。

When connecting the wire lock screw of the B-P port on the BMS , be sure to tighten the screw from the front of the BMS to the back to press the wire, so that the fixing hole of the back heat sink can be tightly attached to the installation surface of the battery pack.

建议 B-P-导线规格: 双端_3512_4AWG_150mm_两端 SC35-6、双端_3512_2AWG_150mm_两端 SC50-6

Suggested B-P- wire specifications: double ended wire_ 3512_ 4AWG_ 150mm_ SC35-6 at both ends, double ended wire_ 3512_ 2AWG_ 200mm_ SC50-6 at both ends

9.保修 Warranty

本公司生产的所有锂电池保护板, 质保一年; 人为因素导致损坏的, 有偿维修

All lithium battery BMS produced by our company has a one-year warranty; if the damage caused by human factors, paid maintenance

10.注意事项 Precautions

1. 不同电压平台的保护板不能混用, 如三元类保护板不能使用铁锂电池上;

BMS of different voltage platforms cannot be mixed. For example, NMC BMSs cannot be used on LFP batteries.

2. 不同厂家的排线不通用, 请确保使用我们公司配套排线;

The cables of different manufacturers are not universal, please make sure to use our company's matching cables

3. 在测试、安装、接触和使用保护板时, 要做好防静电措施;

Take measures to discharge static electricity when testing, installing, touching and using the BMS

4. 不要使保护板的散热面直接接触电芯, 否则热量会传送到电芯, 影响电池的安全;

Do not let the heat dissipation surface of the BMS directly contact the battery cells, otherwise the heat will be transferred to the battery cells and affect the safety of the battery

5. 不可自行拆卸、更改保护板元器件;

地址: 东莞市松山湖区工业南路 14 号天安云谷 7 号楼 21 层

电话: 0769-82822953

Address: 21 / F, building 7, Tian'an Yungu, No. 14, Gongye South Road, Songshanhu District, Dongguan TEL: 0769-82822953

Do not disassemble or change BMS components by yourself

6. 本公司保护板金属散热片进行了阳极氧化绝缘处理，氧化层破坏后仍会导电，组装作业

中避免散热片与电芯、镍带接触；

The company's protective plate metal heat sink has been anodized and insulated. After the oxide layer is damaged, it will still conduct electricity. Avoid contact between the heat sink and the battery core and nickel strip during assembly operations.

7. 如果保护板出现异常，请停止使用，等问题解决了再使用；

If the BMS is abnormal, please stop using it and use it after the problem is solved

8. 插拔针座连接线，注意按压卡扣位拔插，否则可能造成线材损坏；

Plug and unplug the connector cable, pay attention to press the buckle position to unplug and unplug, otherwise the wire may be damaged.

9. 保护板内置小功率并联能力，大电流并联请选择单独配件，串联使用需另行定制。

The BMS board has built-in low-power parallel connection capability. For high current parallel connection, please choose a separate accessory. For series connection, it needs to be customized separately.

10. 当电池为 4 串铁锂时，保护板的 Uart 及 DO 的 12V 电压不会稳压输出，跟根据电池总压变化，实际电压值会略低于电池总压。故欠压时，涉及的 12V 输出的配件会因供电不足而无法使用，例如 WIFI 模块、4G 模块等；

When the battery is 4 strings of LiFePO4, the 12V voltage of the Uart and DO of the BMS does not regulate the voltage output, and the actual voltage value will be slightly lower than the total battery voltage according to the total battery voltage change. Therefore, in the case of undervoltage, accessories with 12V output will be unable to be used due to insufficient power supply, such as WIFI module, 4G module, etc.

11. 特别说明 Special Note

我司产品进行严格的出厂检验测试，但是因为客户使用的环境不同（特别是在高温、超低温、太阳下等），难免会出现保护板故障，所以客户在选择和使用保护板时，需要在友好的环境下使用，及选择一定冗余量的保护板。

Our products undergo strict factory inspection and testing, but due to the different environments used by customers (especially in high temperature, ultra-low temperature, under the sun, etc.), it is inevitable that the protection board will fail. Therefore, when customers choose and use BMS, they need to be in a friendly environment, and select a BMS with a certain redundancy capability.
